Abstract:

We developed “ST-MIND” Using AI, Python and Django. As student, we know that most of student during college they are not able to understand What’s they have to do. So we decided to solve this problem using AI.

To improve education system through connecting all batchmates and teachers to solve any doubt. ST-MIND is a platform for Students around the College to discuss their issues and opinions.

1. Introduction

ST-MIND is a “Self Study Website”. ST-MIND is a Free Services that allow you to create an Online Page. To Connect With friends, Senior, and Teachers. Make a new connection with anyone anywhere. On your ST-MIND Page you can share courses and assignments, doubt, questions answers and personal information

IN ST-MIND website , We have all web development tools like HTML, CSS, JAVASCRIPT, BOOSTRAPE, JSON etc.

IN backend we have used PYTHON-DJANGO.

Which makes the website more interactive and Highly Secure and Loading Speed is very heigh.

ST-Mind site can assist students people to become more socially capable. ST-MIND is also web-based platform of data communication. ST-MIND platforms allow students to have conversations, share information and create learning content. ST-MIND has different forms, together with assignments, notes, course, photo-sharing sites, instant messaging, idea, thought-sharing sites, and more

2 Literature Review

ST-MIND platforms are regarded as powerful tools for teaching and learning practices through their nature of openness, interactivity, and sociability. Replacing the conventional teaching practices, these platforms have become virtual environments for educational purposes especially suitable to enable learners to create, share and receive students and teachers generated content by virtue of their interactive features In fact, UDEMY and Great-Learning are among the most intensively investigated learning platform,

platforms for their credibility in education and various aspects of platforms were examined in this research,

focusing on such platforms because of their widespread and ever increasing use across all students around the college, in particular among the students.

2.1 Learning

Among Learning platforms, ST-MIND attracts the attention of most educators and researchers for its potential in education; thus, a considerable number of studies were carried out to investigate the use of learning as an educational platform in terms of communication, language teaching and learning. Being the most popular Learning platform

ever, ST-MIND is reported to have features contributing to communication skills with peers and school or faculty members, participation, collaboration, peer support, commitment in educational activities. As an educational tool, it also enhances language teaching and learning and offers advantages not only for students but also for educators in that ST-MIND provides opportunities for engaging learners on tasks, for improving all four skills in English and increasing student motivation; however, it should be noted that educators need to have pre-planned objectives for ST-MIND to be utilized as an educational environment.

2.2 Assignment /Notes

ST-MIND is the platform where you can get access to download assignments, notes and materials.

In ST-MIND user can upload lectures, courses, and videos.

Some times when any students are absent. he/she can get the class through ST-MIND with the help of classmates or teachers.

The ST-MIND platform can also utilized as an online space, and , several studies

carried out to investigate the use of UdeMy for educational purposes . Various aspects of ST-MIND from teaching , positive student attitudes and

increase in student engagement, interpersonal relations and class participation in higher education , pre-service teacher education , professional

development of practicing teachers to increasing learner autonomy in language learning

have all been investigated and found ST-MIND to be a valuable learning and teaching space.

3.Problem Statement

Students have Lots of Problem During Their College Life .

They Don't have Perfect Knowledge about their domain.

Students are Facing Lots of problems in Academic During Selection of Courses.

Student will not able to find any mentors supports.

Students not able to take guide of their seniors and mentors.

ST-MIND will be useful for everyone..

student as well teacher to share any information among the student.

STMIND solves the problems for notes and material.

STMIND also helps to solve student doubt.

here, student as well Teacher can upload any course.

Here, anyone can share their Thoughts.

Any Announcement, any activity any news anyone can sphered.

Here student will able to contact with their senior/Teachers and their Mentors

4. Over All Architecture

we shall explore the design of the system through Architecture diagram of ST-MIND .

Architecture diagram tells us about how to run ST-MIND.

How to create an user account

How to follow other ,like ,vote and share .

How to download materials from others account.

It is similar to other learning platform but in ST-MIND is advanced learning platform.

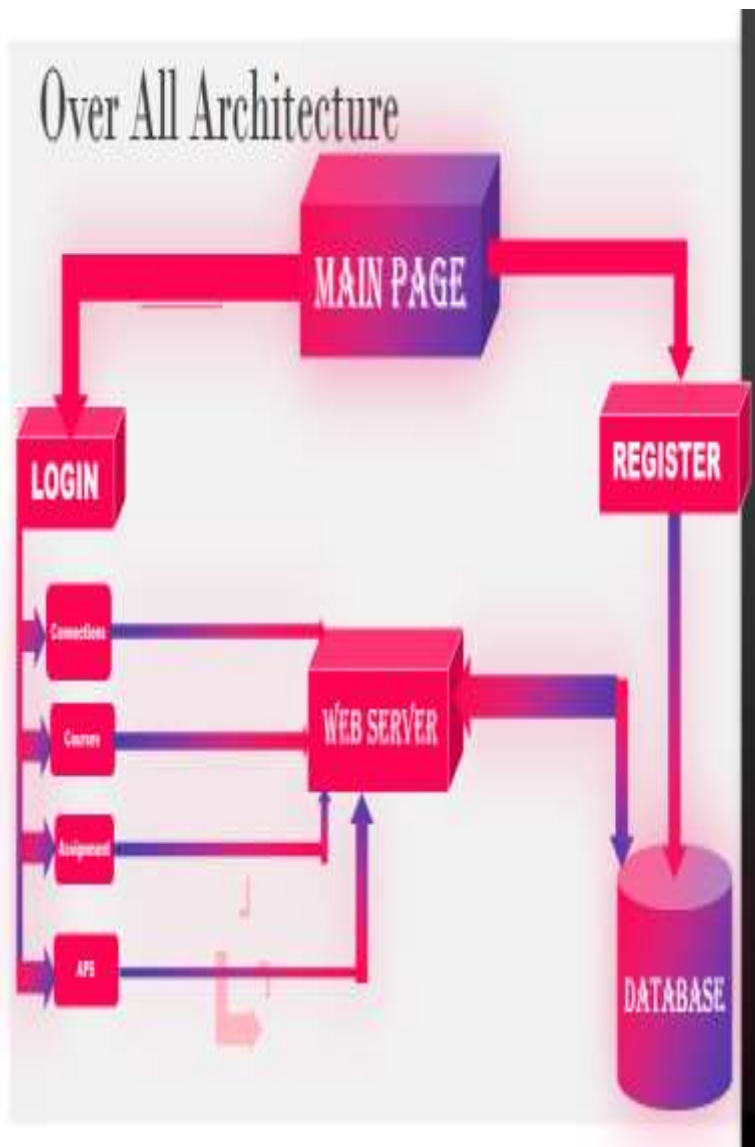

FIG.1

User can also turn on mouse controlling system by pressing Mouse Control Module button using that yellow color cap. After that, another live video frame will be shown for tracking the hand movements to recognize mouse functions. Below Figure represents the system architecture for virtual communication system

4. SYSTEM DESIGN

4.1 Algorithm Used for ST-MIND

ST-MIND platform, the Django framework is employed, and python library is employed for students communications. The AI and SQLITE are used for to design and make fruitful results.

4.2 Django

Django is a Python-based web framework which allows you to quickly create web application without all the installation or dependency problems that you normally will find with other frameworks. When you are building a website, you always need a similar set of components: a way to handle user authentication (signing up, signing in, signing out), a management panel for your website, forms, a way to upload files, etc. Django gives you ready-made components to use.

Why Django?

It's very easy to switch database in Django framework.

It has built-in admin interface which makes easy to work with it.

Django is fully functional framework that requires nothing else.

It has thousands of additional packages available. It is very scalable.

Security

Since Django framework is made for making web development easy, it has been engineered in such a way that it automatically do the right things to protect the website. For example, In the Django framework instead of putting a password in cookies, the hashed password is stored in it so that it cannot be fetched easily by hackers.

Diagrams:

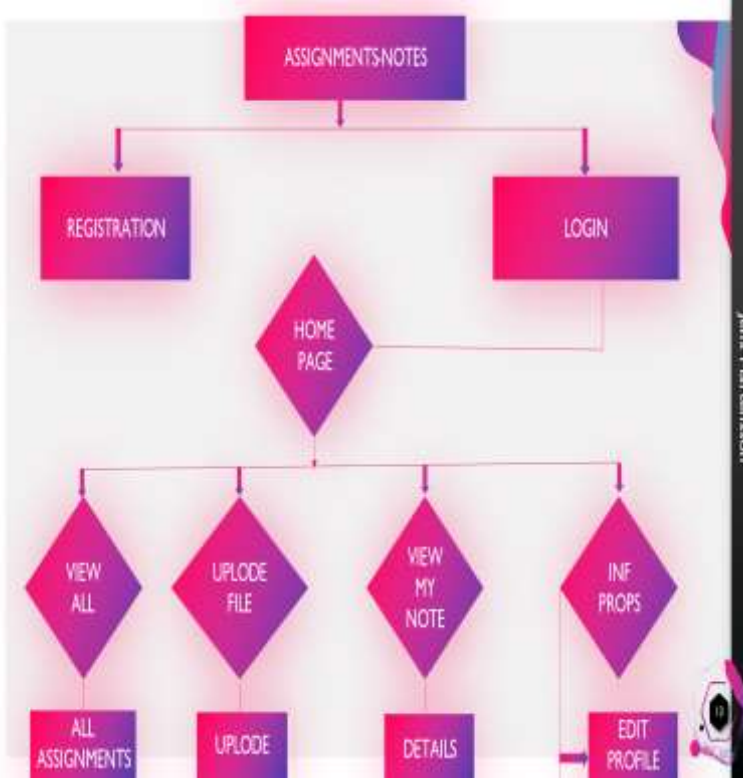

FIG.3

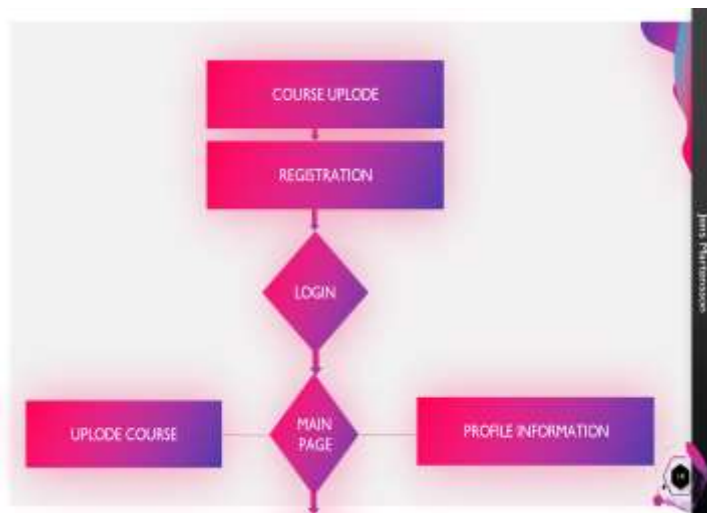

FIG-4

Pillow

Enhanced support for content languages.
Integration with the TinyMCE spellchec

MySQL client

This is a database client application that serves as the medium/interface between the user running Python codes and the MySQL database. MySQL client developed. replace MySQL-python and provides support for Python3, although it is backward compatible as well. Module, it is first trained.

4.5 crispy forms

Django Crispy Forms is a Python package that styles the Django forms with the help of built-in template packs.

5. Conclusion & Future Work

ST-MIND mission is to give students the power to share and make the college more open. students use ST-MIND to stay connected with friends and teachers, to discover what's going on in the classroom, and to share and express what matters to them. User can share their idea and what's happening around in our daily life through ST-MIND.

They also can get feedback from their friends about their reaction toward students feeling. It is the best medium to share feelings and thoughts with others. students can share their achievements to get some appreciation, or can share their sorrows to get support from the generous friends.

ST-MIND application is easy to be used by the students. ST-MIND allows students to navigate easily and fast. Other than that, ST-MIND is an interactive platform help students to chat with others, can get updates of events, can find old friends and schoolmates.
